COVER LETTER

My name is Tainá Selayaran, and I am a Biomedical Informatics student at the Federal University of Health Sciences of Porto Alegre. I am currently pursuing a semester in Bioinformatics at the Polytechnic Institute of Setúbal, Barreiro campus, through an academic mobility program with the possibility of extending it for one year. I have a deep passion for integrating technology and science and am seeking an internship or job opportunity where I can contribute to innovative projects while gaining further professional experience.

In recent years, I had the opportunity to intern in the field of Genomic Surveillance at the Scientific and Technological Development Center of the State Center for Health Surveillance, where I developed skills in genomic analysis, task automation using Python and R, and working with complete genome sequencing databases. Furthermore, I was also a research fellow in the project on respiratory viral infections in Rio Grande do Sul, which strengthened my interest and knowledge in the field of bioinformatics.

I am looking for a position that allows me to continue developing my skills in data analysis, software development, programming, and bioinformatics, in a way that I can balance with my academic commitments. I am available to work both remotely and in person, ensuring flexibility to collaborate with your team and fulfill my responsibilities with excellence.

Thank you in advance for your consideration. I am available to provide further information or schedule an interview.

Tainá M Selayaran
